

“EXTERNAL EMPLOYEE ASSISTANCE PROGRAM THAT WILL HELP YOU REGAIN CONTROL OF YOUR WELL BEING”.

1 in 5 adults experiences a mental health condition every year. 1 in 20 lives with a serious mental illness such as schizophrenia or bipolar disorder. In addition to the person directly affected by a mental illness, the family, friends and communities are also affected.

Mental illness results from complex interactions between the mind, body and environment. Factors which can contribute to mental illness are:

- long-term and acute stress
- biological factors such as genetics, chemistry and hormones
- use of alcohol, drugs and other substances
- cognitive patterns such as constant negative thoughts and low self esteem
- social factors such as isolation, financial problems, family breakdown or violence

These factors can be minimized by a strong and supportive community environment.

NAMI – National Alliance on Mental Illness (2016) Retrieved May 18, 2016 from <https://www.nami.org>
